

## Claims

- [1] A military lantern comprising:
  - a body formed in a rectangular solid shape and having a power source buried therein;
  - an electric bulb, a reflection mirror and an outer lid mounted on the upper end portion of the body in a perpendicular direction to the body;
  - at least one switch mounted on the right side or the left side of the body;
  - a lower lid mounted on the lower end of the body;
  - a cylindrical filter keeping case mounted on the front surface of the body; and
  - a plurality of color filters contained inside the filter keeping case.
- [2] A military lantern according to claim 1, wherein the lower lid is connected with the body by rotation of a rotational locking member, and a conducting latch member connected to the rotational locking member connects an electric wire with the power source, the electric wire being connected to the electric bulb.
- [3] A military lantern according to claim 1, wherein an inner transparent lid is mounted between the reflection mirror and the outer lid.
- [4] A military lantern according to claim 1, wherein a plurality of satellite LED bulbs are mounted around the electric bulb.
- [5] A military lantern according to claim 1, wherein a spare bulb keeping recess is formed on the upper end of the inside of the body.
